LLM-Guided Iterative Fuzzing Prompt Template

1. **Contract Source Code:**
   Include the full source code of the contract being tested.
2. **Task Description:**
   Briefly describe the specific fuzzing task and objectives.
3. **Possible Branches:**
   List all potential branches and conditions within the contract.
4. **Current Branch Explanation:**
   Provide an explanation of the currently selected branch and its significance.
5. **Current Sequence:**
   Outline the sequence of actions or inputs currently being tested.
6. **Sequence Explanation:**
   Describe the relevance and purpose of the current sequence in the context of the fuzzing task.
7. **Current Fuzzing Duration:**
   Specify the duration of the current fuzzing session.
8. **Current Coverage:**
   Present the current code coverage statistics achieved during the fuzzing process.
9. **Covered Branch Snippet:**
   Include snippets of code from branches that have been covered so far.
10. **Covered Branch Explanation:**
    Explain the covered branches, highlighting why they are important.
11. **VFCS Format:**
    Present the Vulnerable Function Call Sequence format.
12. **Incremental and Guided Analysis Questions:**
    Set Chain-of-Thought questions to guide further analysis and direct the fuzzing towards deeper exploration of uncovered branches or complex conditions.
